

OmniaGrip

2014

- ▶ OmniaGrip is a non-slip fibre-glass sheet material that can be adhered to the surface of the Omnia panel.
- ▶ To ensure a high strength bond, the panel should be free from dust and dirt. It should be wiped down and then cleaned with a cleaning agent (Omnia recommends SABA Cleaner 48).
- ▶ A roll of OmniaGrip should be placed onto the panel and clamped down at one end making it possible to be rolled out to cover the surface (this should not be done till the panel has been prepared); the sheet of OmniaGrip should be wiped with a moist cloth as it is rolled to remove any dust.
- ▶ SABA Primer 4518 should be spread over the surface that the roll is not covering and left for 15 – 30 minutes before spreading SABA Sealstak 750 over it as shown in the diagram.
- ▶ This should be left for a further 10 minutes before rolling out the OmniaGrip sheet, being careful not to trap any air between the two surfaces.

- ▶ Finish the process for by removing the clamps and peeling the OmniaGrip back to expose the remainder of the unprimed or sealed panel.
- ▶ The same prime and adhesive application should be followed and then the peeled back piece of OmniaGrip can be relaid over the panel.
- ▶ A heavy roller should be used to ensure a good contact level and an even application. Clamp down the edges (e.g. with scuff band as shown in the diagram, left) or put weight on the full area of the panels for 24 hrs.

Omnia (CS) Ltd is a distributor for SABA products and so all products can be purchased directly with the OmniaGrip.
